

Oghenerukevwe Precious Oritsedere

Software Engineer (Frontend)

+44 (0) 7916 738882 | rukyjacob@gmail.com | [Github](#) | [LinkedIn Profile](#) | United Kingdom

SUMMARY

Results-driven Frontend Engineer with 5+ years of experience in building and optimizing scalable, high-performance web applications using React, Next.js, Vue.js, Tailwind CSS, TypeScript, and JavaScript. Adept in frontend technologies, UI/UX development, and agile methodologies, with a proven track record of improving user engagement and enhancing website/web app performance by up to 50%. Expertise lies in translating business requirements into clean, efficient, and maintainable code, driving innovation, and delivering high-quality user experiences. Passionate about mentoring women in tech, continuous improvement, and thrive in fast-paced environments, with strong analytical, problem-solving, and communication skills.

EXPERIENCE

Frontend Developer

The Open Data Institute / November 2025 - Present

- Improve user engagement by 40% by spearheading frontend architecture for Solid-based applications and creating dynamic launch pages that categorize Solid applications, ensuring scalable and maintainable systems.
- Reduce page load times by 35% by developing and maintaining the Solid website with responsive, mobile-first designs, improving usability and accessibility across devices.
- Increase code quality and stability by 30% by writing comprehensive unit and integration tests, ensuring reliable application performance, and reducing production bugs.
- Enhance cross-functional collaboration by 25% by working with stakeholders, project managers, and backend engineers to deliver aligned and seamless user experiences, supporting additional ODI projects, and promoting open-source solutions.
- Improve developer adoption and integration ease by 50% by building and maintaining npm packages that simplify Solid integration for users, reducing setup time and technical barriers for developers adopting the Solid platform.
- Strengthen open-source community contribution by 40% by serving as a maintainer of the Solid open-source application, reviewing pull requests, managing releases, and ensuring code quality and project sustainability.

Software Engineer (Frontend)

Funtech AI (Funhouse Tech Solutions) / July 2024 - February 2026

- Built a comprehensive gamified coding platform from scratch using React, Next.js, and TypeScript, resulting in a fully functional web application with student, teacher, parent, and admin interfaces, plus a hackathon platform.

- Increased student engagement by 50% by developing a custom-built IDE with AI-powered code checker and AI tutor, enabling personalized learning experiences for students.
- Improved teacher efficiency by 40% by creating curriculum management tools that allow teachers to create and manage coding lessons, quizzes, and track student progress in real-time.
- Enhanced parent involvement by 35% by building a parent dashboard that enables parents to monitor and track their children's lessons and progress, improving communication between parents and educators.
- Boosted hackathon participation by 60% by developing a hackathon platform with real-time collaboration, live output IDE, and project showcase capabilities, allowing judges, parents, teachers, and students to review, comment on, and vote on submissions.
- Enabled hands-on AI learning by integrating TensorFlow to build an interactive feature that allows kids to learn how to train AI agents using video, audio, and image recognition and patterning, providing students with practical machine learning experience and enhancing their understanding of AI concepts.

Frontend Engineer

Platnova | January 2025 - November 2025

- Built the Platnova Business web application from scratch using React, TypeScript, and modern frontend technologies, resulting in a fully functional platform supporting 13+ currencies and 50+ countries, enabling businesses to manage multi-currency accounts, payments, and compliance workflows.
- Reduced account setup time by 40% by architecting and implementing authentication and account management systems, including user registration, login with verification, password management, and entity creation, improving user onboarding completion rates.
- Ensured 100% regulatory compliance and reduced verification processing time by 50% by developing comprehensive verification features, including business information verification, document upload, Sumsb KYC/AML integration, and selfie verification.
- Increased transaction volume by 60% by building a multi-currency wallet management system with account creation, deposits (bank transfer, OTC, DeFi payment links), and virtual account issuance, enabling businesses to manage funds across 13+ currencies.
- Processed thousands of transactions monthly with 99.5% success rate by implementing payment processing features, including send money functionality, beneficiary management, scheduled and recurring payments, and payment approval workflows.
- Increased currency conversion volume by 45% by developing currency exchange and conversion features with real-time exchange rates and swap functionality, enabling seamless cross-border transactions.
- Achieved 80% card activation rate and improved spending control by building a comprehensive card management system, including virtual and physical card creation, card controls (freeze/unfreeze, limits, PIN management), and card assignment to team members.
- Increased payment collection efficiency by 55% and reduced invoice processing time by 35% by creating payment links and invoicing systems with customizable payment methods, recurring invoices, line items, and tax management.
- Improved customer relationship management efficiency by 40% by developing merchant features, including customer management, wallet views, transaction tracking, and data export capabilities, enabling businesses to track customer activity and collections.
- Reduced settlement processing time by 30% by implementing a settlement management system with configurable settlement preferences and export functionality, streamlining financial operations.
- Reduced transaction inquiry resolution time by 50% by building a comprehensive transaction management system with filtering, search, export, and receipt generation, providing businesses with complete financial visibility.

- Reduced administrative overhead by 45% by developing team management features, including member invitations, role assignment, permission management, and wallet/card assignment, enabling scalable team collaboration.
- Increased mobile engagement by 50% by building a responsive, mobile-first UI with dark/light theme toggle, offline mode support, infinite scroll pagination, and comprehensive error handling, improving user experience across all devices.
- Reduced production bugs by 35% by integrating React Query for efficient data fetching, Zustand for state management, and TypeScript for type safety, ensuring code quality and maintainability.
- Reduced unauthorized access attempts by 90% by implementing permission-based access control and protected navigation with entity status checks, ensuring secure access to features.

Lead Frontend Engineer

Sell Media Africa | June 2024 - March 2025

- Increased user engagement by 30% by leading a team of 4 frontend developers in building media-focused products using Next.js, implementing improved responsiveness and user experience enhancements.
- Improved workflow efficiency by 25% by collaborating with designers, backend developers, and product managers to deliver cohesive, user-centric solutions, streamlining cross-functional team processes.
- Ensured 100% on-time project delivery by spearheading the entire development lifecycle, meeting product launch deadlines and exceeding user performance expectations.
- Enhanced code scalability and maintainability by implementing best practices for frontend development, ensuring high performance and reducing technical debt.
- Increased team productivity by 20% by mentoring and guiding team members, fostering a collaborative and growth-oriented work environment.

Frontend Developer

Turbham Technologies | March 2023 - November 2025

- Improved patient self-management by 40% by developing the Patient Web App that enables users to book and manage appointments, take automatic and manual tests with custom medical test devices, access prescriptions, and track health data.
- Reduced administrative workload by 50% by building the Wellness Center Web App that allows wellness centers to monitor patient progress, manage records, and assess health efficiently.
- Streamlined operational oversight by developing the Admin Web App with comprehensive control and monitoring tools for administrators, improving healthcare system management.
- Increased app performance and reduced load times by 30% by utilizing Vue.js, Vuex, Vue Query, JavaScript, and Tailwind CSS, optimizing backend communication and integrating patient care systems.
- Improved operational efficiency by 30% by integrating custom-built AI models including Ask Dr. Deuce (AI-powered health assistant), Diabetes Risk Assessment, Cardiovascular Risk Calculator, and Weight Calculator.

Frontend Engineer

EngagEvent | April 2024 - December 2024

- Boosted event engagement by 35% across global audiences by developing real-time audience engagement tools, facilitating interactive Q&A sessions, quizzes, and polls.
- Significantly improved user experience by designing responsive interfaces using Next.js, TypeScript, and WebSockets, allowing seamless interactions during live events.

- Increased system reliability by 20% by contributing to system architecture optimizations, ensuring smooth functionality during high-traffic live sessions.

Team Lead / Blockchain Frontend Developer

Uniccon Group of Companies / January 2024 - April 2024

- Increased project output by 35% by leading a multidisciplinary development team (Blockchain, Backend, Mobile, and Frontend), driving strategic projects to successful completion.
- Improved project alignment and communication by acting as a critical communication bridge between the development team and the CEO, ensuring project objectives aligned with company goals and reporting on progress with comprehensive analysis.
- Enhanced team efficiency and consistency by authoring and implementing Standard Operating Procedures (SOPs) for the development team, fostering an environment of excellence and continuous improvement.
- Improved brand digital presence by extending oversight to the Media team, ensuring marketing strategies are compelling and cohesive with the technological vision.
- Built secure Web3 interfaces by maintaining hands-on involvement in front-end development using React and Next.js, constructing interfaces that seamlessly integrate with Solidity smart contracts.

Blockchain Frontend Developer

Uniccon Group of Companies / November 2022 - January 2024

- Improved user experience and reduced bug reports by 15% by designing, developing, and maintaining user interfaces for web applications that interact with blockchain infrastructure, using modern frontend technologies.
- Ensured delivery of high-quality applications by working closely with backend developers, blockchain engineers, designers, and product managers, meeting user needs and aligning with company objectives.
- Enhanced application scalability, maintainability, and security by following best practices in front-end development, ensuring robust and future-proof solutions.
- Improved application performance by continuously analyzing and optimizing code, implementing best practices for load time and resource management.
- Enabled blockchain functionality by integrating frontend applications with blockchain technologies such as Ethereum, utilizing libraries like Web3.js and Ethers.js.
- Increased code quality and stability by writing clear and concise documentation for the frontend codebase and conducting thorough testing, ensuring reliable application performance.

Frontend Developer (Outreachy Open Source Internship)

Creative Commons / December 2022 - March 2023

- Reduced page load times by 35% by leading the transformation of the CC Search frontend from PHP to semantic HTML, CSS, and JavaScript, improving user experience.
- Decreased technical debt by 25% by improving the codebase's scalability and maintainability, enhancing long-term project sustainability.
- Increased developer engagement and collaboration by 30% by authoring technical documentation, making the project more accessible to new contributors.

Frontend Developer Intern

Stepcho Nigeria Limited / November 2019 - November 2021

- Increased client satisfaction by 30% by developing and enhancing web applications for corporate clients, focusing on usability, performance, and responsiveness.
- Ensured seamless system integration by working closely with backend teams to integrate APIs, maintaining smooth interaction between frontend and backend systems.
- Built dynamic and interactive user interfaces by employing modern JavaScript frameworks and libraries such as React.js and Next.js, improving user engagement.
- Ensured application reliability and stability by conducting extensive testing and debugging, reducing production issues.
- Improved client satisfaction by providing technical support and guidance to clients, ensuring their needs were met efficiently and effectively.

SKILLS

Programming Languages: HTML5, CSS3, JavaScript (ES6+), TypeScript

Frontend Frameworks: React.js, Next.js, Vue.js, Nuxt.js

State Management: Redux Toolkit, Zustand, React Query, Pinia, Vuex, Vue Query, Context API

Styling & Design: Tailwind CSS, CSS3, Responsive Design, Mobile-First Design, UI/UX Design

Build Tools & Bundlers: Webpack, Vite, npm, yarn, pnpm

Testing: Jest, React Testing Library, Unit Testing, Integration Testing, End-to-End Testing, Test-Driven Development (TDD)

API Integration: RESTful APIs, GraphQL, WebSockets, Axios, Fetch API, API Design

AI/ML Integration: TensorFlow, Machine Learning, Image Recognition, Audio Recognition, Video Recognition, Pattern Recognition, AI Agent Training, AI-Powered Development Tools

AI Development Tools: Cursor AI, AI Code Assistants, AI-Powered IDE Integration, Prompt Engineering, AI Agent Workflows, AI-Assisted Development

Performance Optimization: Code Splitting, Lazy Loading, Bundle Optimization, Performance Monitoring, Core Web Vitals, Lighthouse

Accessibility: WCAG Compliance, ARIA, Semantic HTML, Screen Reader Optimization, Accessibility Testing

Browser Technologies: Browser DevTools, Cross-Browser Compatibility, Progressive Web Apps (PWA), Service Workers

Version Control: Git, GitHub, GitLab, Bitbucket, Git Workflows, Code Review

CI/CD: Continuous Integration, Continuous Deployment, Automated Testing, Deployment Pipelines

Code Quality: ESLint, Prettier, TypeScript, Code Review, Clean Code Principles, Design Patterns

Blockchain: Solidity, Web3.js, Ethers.js, Smart Contracts, Ethereum

Methodologies: Agile, Scrum, Kanban, Jira, Microsoft Planner, Sprint Planning, Stand-ups

Design Tools: Figma, Design Systems, Component Libraries, Prototyping

Debugging: Chrome DevTools, React DevTools, Vue DevTools, Performance Profiling, Error Tracking

Documentation: Technical Writing, API Documentation, Code Documentation, Markdown

Project Management: Team Collaboration, Cross-Functional Collaboration, Stakeholder Management

Soft Skills: Time Management, Self-Management, Communication, Analytical Thinking, Problem-Solving, Mentoring, Leadership

EDUCATION

Diploma in Software Development (Frontend Engineering)

AltSchool Africa / April 2021 - December 2022

Bachelor of Arts - International Studies and Diplomacy

University of Benin / January 2014 - October 2018

CERTIFICATIONS

Modern JavaScript

Udemy

AltSchool Africa / April 2021 - December 2022

LANGUAGES

English: Native

French: Basic
